

MOLDO[®]

FLEXLIFE
FLOOR

KIDS OUTDOOR PLAY • WATER PARK FLOOR • KINDERGARTEN SCHOOL

Flexlife is a rubber based aquatic safety surface designed for use in wet areas with barefoot traffic , kids outdoor Play areas and Kindergarten Schools. Created as an alternative to concrete and other conventional materials, Life Floor is the only safety surface specifically designed and engineered to perform in aquatic environments.

Why do people love to walk on Flexlife ?*

Flexlife combines Innovative safety with unparalleled design capabilities, delivered by an expert team committed to a world-class experience for everyone who interacts with our products.

All over the world, people trust Flexlife to make their aquatic environments look and feel extraordinary.

*While on Flexlife , people also love to run, jump, roll, somersault, dance, dip, cha-cha, skip, saunter, sashay, wiggle, twist, twirl, whirl, or even do a handstand or two.

Why is thickness important?

As tile thickness increases, so does critical fall height and safety. For aquatic environments with young children, we recommend using our 3/8" tile with Ripple, our most slip-resistant texture.

- 3/16"

Our most economical tile, ideal for coping, stairways, and lower traffic areas.

- 3/8"

Our 3/8" tile has a critical fall height of 1'-0". Ideal for splash pads, zero-depth

- 7/8"

Our 7/8" tile has a critical fall height of 4'-0". Ideal for play areas with toddlers and small children, we also recommend using 7/8" tile at the bottom of slides and around play features.

Life Floor goes wherever you find bare feet and wet floors.

Your feet will be happiest on our tiles, and our tiles are at their best wherever floors are wet and feet are bare. Our most popular applications include: splash pads, slide pads, lily pad landings, slide towers, pool decks, and zero-depth entries. See some of our past and recent projects on the following pages.

Safety cushion floor for critical fall height (fall safe) CFH 3' -2' -1'
